You have 3 equally sized Snickers Bars, and there 5 people in your family. You want to share the candy equally among your family members. Using the figures below, show how you would share the candy bars equally.

- Draw a picture of how much each person gets that is separate from the original bars
- Compare the total amount that one person gets to one candy bar. Use this comparison to name the total amount of candy that one person gets in comparison to one candy bar.
- Now compare the total amount that one person gets to all three candy bars. What fraction of three candy bars does one person get?
